

# The **C&K** Used Parts Program *Quality Without Compromise*

C&K's Used Parts Program has been designed to address the need for cost-effective non-OEM parts, without compromising the quality and reliability that is C&K's industry hallmark.

All of C&K's used parts carry the same, complete parts/labor/rental warranty that C&K's Remanufactured and Builder Programs carry, because all of C&K's used parts go through a rigorous inspection process to ensure that the delivered product meets your expectations—and ours.

C&K's used engines are available either as **long-blocks**, or as **complete assemblies** with manifolds, fuel systems, oil pans, valve covers, etc., and arrive ready for installation.

All used engines are thoroughly inspected before shipping to verify their pristine condition—all seals and gaskets are checked for leaks, bearings are inspected and oil pans resealed, compression and leak-down readings recorded, and digital pictures taken prior to packaging and shipping. Engines with known problem areas (i.e. head gaskets on Chrysler 2.0 engines) have updated gaskets installed prior to shipping in order to avoid an already identified common failure. **No cores are required** with our used engine program, and most applications are ready to ship for delivery in the continental U.S. within three to four days.

C&K also carries a **complete line of used manual transmissions and transfer cases**, cleaned and inspected to meet C&K standards. If a used component does not meet our requirements and/or fails our testing procedure, C&K is in the unique position, as one of the premier remanufactured part suppliers in the

country, of **having qualified builders available to repair the unit prior to shipping.**

This is what separates C&K from other used part suppliers throughout the country—a thorough understanding of how each component works, coupled with a warranty liability which makes the proper functionality of your part as important to us as it is to you.

Most recyclers simply disassemble the salvaged vehicle and sell off the parts, having no knowledge of how the part is supposed to work, and

no ability to repair it prior to shipping if they even knew it was broken. C&K is different. We have a vested interest in the successful installation and long term operation of any part we supply, and the ability and expertise to ensure that you get just the part that you need. **Your success is our success.**

*"When we are faced with the necessity of having to install a non-original equipment part, C&K is our preferred vendor. Their quality, warranties, customer service, and professionalism give us peace of mind knowing that our dealerships and our customers will be taken care of in the manner in which we expect. While the savings that they offer us is substantial, it is incidental compared with the high level of service that they provide."*
